Leaders in ceramic tile design
for over a century

Our heritage in tile design and manufacture gives us a proud history of excellence in product design and customer service.

Founded in 1901, Johnson Tiles is now part of the Norcros Group and has international sister operations in Greece, South Africa, Australia and India. This global presence gives us access to design inspirations and products from across the world.

Our products are used in a wide range of homes, offices and buildings to create a multitude of styles and effects on both walls and floors.

When you buy tiles from Johnson Tiles you can be confident they are a result of our combined experience, state of the art manufacturing and design techniques. We are rooted in our heritage but driven by innovation.

Floor Tiles

Technical information

Wall tiles

Some wall tile glazes, particularly the more specialised effects used to create surface features and strong colours, are subject to crazing. This aspect is an inherent characteristic of the glazes and may occur after fixing but will not affect the performance of the tiles.

Non-spacer tiles should be spaced by the use of readily available spacer pegs. It is recommended that proprietary tile edging trims are used for all external corners and exposed tiling edges.

Natural stone borders and mosaics

The colour of natural stone borders and mosaics will vary as the product is from naturally occurring material. Tiles should be laid out to assess the degree of colour variation and to achieve an acceptable blend prior to fixing. All natural stone products require sealing with a proprietary stone sealer in accordance with the manufacturer's instructions.

Glass Decorative Borders

This brochure includes details of glass decorative borders manufactured from tempered glass. They are designed to be used in conjunction with ceramic tiles. These glass borders should be cut using a wet wheel cutter and cut edges smoothed with a carborundum stone. Care should be taken when grouting glass products to avoid scratching the glass surface.

Coloured grouts

If coloured grouts are used then the manufacturer's instructions for use should be carefully followed. A trial area should be grouted before proceeding with the whole tiled area to check whether any staining of the tiles occurs. Johnson Tiles accepts no liability for staining or damage to tile surfaces incurred during grouting of the tiles. Generally the use of such grouts is not recommended with satin or matt glazed products.

Grouting and cleaning

Care should be taken during installation, particularly when grouting, to avoid scratching the glazed surface. Abrasive cleansers and strong chemicals that may harm the decoration should not be used.

Floor tiles

Slight variation in overall size and shade of floor tiles occurs during the manufacturing process. Where possible, sufficient tiles for the area to be covered should be obtained in one consignment to ensure that a supply of compatible sizes and shades is achieved.

Only porcelain floor tiles may be suitable for certain external situations. Please check the suitability before installing any floor tiles in areas subject to frost.

The correct floor tile adhesive and grout suitable for the installation must be used.

Tile sizes

All sizes given in this brochure are nominal sizes quoted as the nearest metric modular size. All dimensions are in millimetres. For details of actual work sizes please refer to the product details given on the carton.

Adhesives and grouts

The Johnson Professional range of adhesives, grouts and tile care products is recommended for all tile fixing. Further information can be obtained from the technical support line 0870 609 2851.

Quality Standards

Johnson Tiles manufactures to strict levels of quality control to comply with the requirements of Product Standard BS EN 14411

IMPORTANT

During the course of manufacture of all ceramic tiles some variation in shade or pattern can occur.

Before fixing wall tiles several cartons should be opened and their contents mixed to provide an attractive natural finish, an acceptable colour blend and to observe the direction of patterning.

Before laying floor tiles several cartons should be opened and the contents mixed to ensure that the size, shade, colour and patterning are acceptable.

Johnson Tiles cannot accept any liability for wall and floor tiles that have been fixed.

Nothing in these statements does or will affect the statutory rights of the consumer.

Every effort has been made to ensure the accuracy of the information given in this brochure. In the interest of progress, however Johnson Tiles reserve the right to change specifications and availability without prior notice. The colours shown on the tile products in this brochure are as accurate as the limitations of the printing processes will allow. Please refer to actual product samples before purchasing.

Our environmental policy

Johnson Tiles have a longstanding commitment to environmental management and has had a formal environmental policy since 1992.

Our environmental management system is certified against the ISO14001 standard.

We were the first ceramics company within the whitewares sector to gain certification against this standard in 1998 and have since successfully upgraded our certification to meet the latest requirements of ISO14001:2004.

We are the only UK wall tile manufacturer to have ISO14001 accreditation.

The company has never been subject to any prosecutions or formal environmental regulatory action for any breaches of environmental legislation.

In 1997 Johnson Tiles were awarded The Queen's Award for Environmental Achievement for our ceramic waste recycling scheme. To our knowledge Johnson Tiles are still the only manufacturer in the world to operate such a system.

Our recycling scheme uses our own ceramic waste material and that of other local ceramics companies. This scheme which has been in continuous use since 1997 also enabled Johnson Tiles to win the Manufacturing Industry Achievement Award for Environmentalist of the Year in 1997.
